

Business Creator

job details

I love travel, product design and adventure sports. I've founded four businesses and sold two of them. My current business is a wearable social distancing device. I am a digital nomad: and have visited many countries - I just need an internet connection and I can work anywhere I like! I work with lots of different people such as web developers, coding wizards and growth hackers.

How can technology keep us fit and healthy?

Healthcare Engineering Professor

BIOMEDICAL

My work is helping people with hip and knee joint problems. I make better hip and knee replacements and devices to help people keep their own joints healthy. I do tests in the laboratory and with people who have joint problems. Understanding maths really helps to solve problems and solving problems is one of the best things you can do in life!

How would maths be used to improve a knee?

Ergonomics Engineer

An ergonomic engineer's job is to make sure the world is human-centred. I make sure people's abilities are considered when designing jobs, equipment, and machines so that no one gets hurt when they use them. I use a digital human (like a computer game), to collect biomechanical data to make sure people of all sizes, shapes, and genders can do their jobs safely and happily.

Fermented Food Maker

What does biomechanical mean?

Fermented Food Maker

BIOMEDICAL

I make fermented foods: healthy foods that are made by microbes (bacteria yeasts & fungi) with a little help from humans. Many different foods can be fermented. Yoghurt is fermented milk. Add the correct amount of salt to crispy chopped white cabbage and leave it at 20C degrees in a jar without any air, and after 20 days microbes will have turned it into 'sauerkraut', a delicious kind of pickle.
