

Senior Technician

ELECTRIC

I assemble and install time lapse cameras and construct Solar Power units for the cameras that work off grid. The tallest ladder I have climbed was 100 metres high. I have worked in America, the Arab Emirates, Ghana, France, Germany, Portugal, Denmark and offshore. I love climbing and photography, and in this job, I get to do both at the same time.

Audio Mastering Engineer

job details

My job is to make music sound as good as it can on as many kinds of loudspeakers as possible before the public hears it. I use things like equalisers, which can make the music sound clearer, and compressors, which can make the quiet parts louder. I have a deep understanding of sound, music, and audio engineering, and work with an artist to get the best possible representation of that artist's music.

job details

Before an electronic unit is installed in a submarine, I assemble all the different parts into a single unit and then test them to make sure they work properly. Sometimes, these units are damaged and returned after use. I find the root cause of the faults and fix them before sending the units back. Alongside all of this, I write a lot of reports and specifications.

What must you do before taking electrical equipment apart?

ELECTRIC Technical Resources Manager

ELECTRIC

I'm in charge of the equipment and projection team in a cinema. I work behind the scenes at live events, making sure the right films play at the right times, the lighting is right and the microphones are turned on and off at the right times. If you like watching films, it's a great job, but you can't choose which ones you watch!
